Phone: +86 199-2914-9257 (CN)

Profile

Master's student at NWAFU working at the interface of **deep learning and hydrology**. Focused on time-series forecasting, streamflow modeling, and **physics-guided (physics-informed) deep learning** for hydrologic prediction and decision support.

Education

M.Eng., Hydrology & Water Resources Engineering — Northwest A&F University (NWAFU)

Sep 2023 – Present · Admitted by recommendation (entrance-exam exemption)

B.Eng. (Honors), Hydrology & Water Resources Engineering — Northwest A&F University (NWAFU)

Sep 2019 – Jun 2023

Research Interests

Deep learning for hydrologic forecasting

Time-series modeling and uncertainty quantification

Streamflow simulation and evaluation

Physics-guided/physics-informed deep learning

Honors & Awards

National Postgraduate Scholarship, 2025

Outstanding Graduation Thesis Award (University Level, Top 5%), 2023

Academic Service

Reviewer, *Expert Systems with Applications* (Elsevier)

Research Skills

Deep Learning (PyTorch): model development for time-series and hydrologic tasks; modular training, rigorous evaluation, and reproducible pipelines

Linux & HPC: proficient with Linux command line and workflow automation; experience processing large datasets on supercomputing/cluster environments
